

TEACHER CERTIFICATION STUDY GUIDE

Table of Contents

Competency #		Pg #
Subarea I. Scientific Inquiry		
0001	Procedures for gathering organizing, interpreting, evaluating, and communicating data	1
0002	Apply principles and procedures of research and experimental design	3
0003	Apply procedures related to the proper use of tools, equipment, and materials (including chemicals and living organisms) commonly used in biology, and practices for maintaining safety during biological investigations	5
0004	Understand historical and social aspects of biological study and contributions made to biology by various people.....	9
0005	Understand the interrelationships between biology, society, technology, and other sciences and disciplines.....	11
0006	Analyze the nature of scientific thought and inquiry	12
0007	Understand processes for decision-making related to biological problems and issues	13
Subarea II. Cells and Cell Theory		
0008	Understand cell structure and function and the cell theory	14
0009	Understand the chemical components of living systems and basic principles of biochemistry	18
0010	Analyze physiological processes of cells	24
0011	Analyze cell growth, division, and differentiation.....	33
Subarea III. Characteristics of Organisms		
0012	Understand the principles of taxonomy and classification in biology.....	39
0013	Analyze reproduction, development and life cycles of living organisms	42
0014	Analyze the processes used by living organisms to obtain, store, and use energy	45

TEACHER CERTIFICATION STUDY GUIDE

Competency #	Pg #
0015 Analyze the anatomy and physiology of living organism.....	46
Subarea IV. Human Biology	
0016 Understand the structures and functions of the human skeleton, muscular, and Integumentary systems	54
0017 Understand the structures and functions of the human circulatory and immune systems.....	56
0018 Understand the structures and functions of the human respiratory and excretory systems	61
0019 Understand the principles of human nutrition and structures and functions of the human digestive system	64
0020 Understand the structures and functions of the human nervous system and endocrine systems	66
0021 Understand the structures and functions of the human reproductive systems and the processes of embryonic development	69
Subarea V. Principles of Heredity and the Evolution of Life	
0022 Understand the principles of Mendelian and non-Mendelian genetics	71
0023 Understand the synthesis of DNA, RNA, and protein.....	75
0024 Understand genes, chromosomes, and changes in genetic material.....	81
0025 Analyze the process of natural selection.....	86
0026 Analyze the theory of evolution	89
Subarea VI. Matter and Energy in Ecosystems	
0027 Understand populations and communities	93
0028 Understand types and characteristics of ecosystems and biomes and factors affecting their change over time	96
0029 Cycling of materials through an ecosystem.....	104

TEACHER CERTIFICATION STUDY GUIDE

Competency #	Pg #
0030 Human ecology and the physical and societal effects of human activities on the environment	105
Sample Test	106
Answer Key	131
Rationale	132
