

TABLE OF CONTENTS

Competency / Skill #	Pg.
SUBAREA I. SCIENCE METHODOLOGY, TECHNIQUES, AND HISTORY	
Skill I-A	Nature of scientific knowledge, inquiry, and historical perspectives: scientific methods and processes; facts, models, theories, and laws; historical roots of science, and contributions made by major historical figures 1
Skill I-B	Mathematics, measurement, and data manipulation; measurement and notation systems; data presentation and interpretation, including error analysis 3
Skill I-C	Laboratory procedures and safety: techniques of safe preparation, storage, use, and disposal of laboratory and field materials; selection and use of appropriate laboratory equipment 5
SUBAREA II. THE PHYSICAL SCIENCES	
Skill II-A	Matter and energy: structure and properties of matter, occurrence and abundance of elements, physical and chemical changes, forms and transformations of energy, conservation of mass and energy 9
Skill II-B	Heat and thermodynamics: thermal energy, measurement, transfer and effects on matter, first and second laws of thermodynamics 13
Skill II-C	Atomic and nuclear structure: atomic and nuclear structure and related chemical properties; nuclear transformations and characteristics of radioisotopes and radiation..... 16
Skill II-D	Mechanics: straight-line, projectile, circular, and periodic motion; Newton’s laws of motion; work, energy, and power; simple machines; torque; friction; conservation of energy and momentum; gravity; Archimedes’ principle and Bernoulli’s principle 19
Skill II-E	Electricity and magnetism: characteristics of static and current electricity, electrical circuits, alternating and direct currents, transformers and motors, sources of EMF, magnetism 26
Skill II-F	Waves: characteristics of transverse and longitudinal waves; reflection, refraction, diffraction, and interference; Doppler effect; sound; electromagnetic radiation; color; optics..... 31
Skill II-G	Periodicity: the periodic table, trends in chemical and physical properties..... 36

TEACHER CERTIFICATION STUDY GUIDE

Skill II-H	The mole and chemical bonding: the mole concept, the formulas and nomenclature of inorganic and simple organic compounds, bonding, electron dot and structural formulas, chemical composition and stoichiometry	38
Skill II-I	The kinetic theory and states of matter: kinetic molecular theory, phase characteristics and transformations, gas laws, characteristics of crystals	48
Skill II-J	Chemical reactions: types of reactions; endothermic and exothermic reactions; effects of temperature, pressure, concentration, and presence of catalysts on reactions; practical applications of electrochemistry; balance chemical equations	52
Skill II-K	Solutions and solubility: types of solutions; solvents and the dissolving process; effects of temperature and pressure on solubility acids, bases, and salts; pH; buffers	57

SUBAREA III.

THE LIFE SCIENCES

Skill III-A	The Cell: biologically important inorganic and organic molecules, structure and function of cells, cell organelles, cellular bioenergetics, the cell cycle and cytokinesis, meiosis and mitosis, homeostasis	61
Skill III-B	Molecular basis of heredity and classical genetics: DNA replication, protein synthesis, Mendelian and non-Mendelian inheritance, mutations and transposable elements, genetic engineering, human genetic disorders, recombinant DNA, mapping the human genome, the interaction between heredity and the environment	68
Skill III-C	Evolution: evidence, theories and patterns of evolution, factors affecting evolution, speciation, hypotheses relating to the origin of life	75
Skill III-D	Diversity of life: general characteristics, biological systems of classification, viruses, bacteria, protists, fungi, plants, and animals	82
Skill III-E	Plants: structure and function of roots, stems, and leaves; nonvascular plants; transport systems, control mechanisms; sexual and asexual reproduction	85
Skill III-F	Animals: anatomy and physiological systems, homeostasis, response to stimuli.....	88

TEACHER CERTIFICATION STUDY GUIDE

Skill III-G. Ecology: population dynamics, social behavior, interspecific relationships, community structures, and species diversity, succession and disturbance, ecosystems, food webs and energy flow, biomes, biogeochemical cycles..... 91

SUBAREA IV. THE EARTH/SPACE SCIENCES

Skill IV-A. Physical geology: minerals and rocks, folding and faulting, earthquakes and volcanoes, structure of Earth, plate tectonic theory and its supporting evidence, hydrologic cycle, weathering, erosional and depositional processes 101

Skill IV-B. Historical geology: uniformitarianism, time scales, fossils and stratigraphy, Earth’s history 110

Skill IV-C. Oceanography: waves, tides, and currents; ocean floor and margins; chemistry of seawater; shore processes; nutrient cycles of the ocean..... 112

Skill IV-D. Meteorology: structure and properties of the atmosphere; seasonal and latitudinal variation of solar radiation; heat budget; circulation patterns and winds; humidity, clouds, and precipitation; air masses, high and low pressure systems, frontal systems, maps, forecasting; climate and climatic change 117

Skill IV-E. Astronomy: theories of the origin and structure of the universe, origins and life cycles of stars, major features and structure of the solar system, Sun-Moon-Earth relationships, artificial satellites and space exploration, Earth’s seasons, time zones, large units of distance, contributions of remote sensing 124

TEACHER CERTIFICATION STUDY GUIDE

SUBAREA V.	SCIENCE, TECHNOLOGY, AND SOCIETY
Skill V-A.	Impact of science and technology on the environment and human affairs..... 135
Skill V-B.	Human and nature induced hazards..... 135
Skill V-C.	Issues and applications: production, use, management, and disposal of energy and consumer products, management of natural resources..... 136
Skill V-D.	Social, political, ethical, and economic issues in science and technology 138
Skill V-E.	Societal issues with health awareness and medical advances..... 139
Sample Test 140
Answer Key 166
Rationales with Sample Questions 167
