

Table of Contents

I. BASIC PRINCIPLES OF SCIENCE (HISTORY AND NATURAL SCIENCE)

A. Nature of scientific knowledge, inquiry, and historical perspectives

1. Scientific methods	1
2. Processes involved in scientific inquiry	1
3. Process skills	2
4. Facts	2
5. Concepts	2
6. Models	2
7. Commonly shared scientific ideals	3
8. Philosophy.....	4
9. Contributions made by major historical figures and landmark events in the field of biology	5

B. Mathematics, measurement, and data manipulation

1. Measurement and notation systems	7
2. Data collection.....	8
3. Data manipulation	8
4. Data interpretation.....	9
5. Data presentation (tables, graphs, charts, error analysis	10

C. Laboratory procedures and safety

1. Safe preparation, storage, use, and disposal of laboratory and field materials	11
2. Selection and use of appropriate laboratory equipment	12
3. Safety and emergency procedures of the science classroom and laboratories	13
4. Legal responsibilities of the teacher	14

II. MOLECULAR AND CELLULAR BIOLOGY

A. Chemical basis of life

1. Basic chemical structures.....	15
2. Atoms, molecules, and chemical bonds	15
3. pH and buffers.....	16
4. Biologically important molecules	17
5. Thermodynamics and free energy.....	19
6. Cellular bioenergetics.....	21
7. Photosynthesis	22
8. Respiration	24
9. Enzymes	27

TEACHER CERTIFICATION STUDY GUIDE

B. Cell Structure and function

1. Membranes, organelles, and subcellular components of cells28
2. Cell cycle, cytokinesis, mitosis, and meiosis32

C. Molecular basis of heredity

1. Structure and function of nucleic acids36
2. DNA replication37
3. Protein synthesis40
4. Gene regulation42
5. Mutation and transposable elements42
6. Viruses43
7. Molecular basis of genetic diseases (cancer, sickle-cell anemia, hemophilia43
8. Recombinant DNA and genetic engineering44
9. Genome mapping of humans and other organisms46

III. CLASSICAL GENETICS AND EVOLUTION

A. Classical Genetics

1. Mendelian inheritance and probability47
2. Non-Mendelian inheritance49
3. Linkage50
4. Human genetic disorders50
5. Interaction between heredity and the environment.....52

B. Evolution

1. Evidence52
2. Mechanisms53
3. Population genetics54
4. Speciation55
5. Phylogeny56
6. Origin of life57
7. Species extinction58

TEACHER CERTIFICATION STUDY GUIDE

IV. DIVERSITY OF LIFE, PLANTS, AND ANIMALS

A. Diversity of life

1. Classification schemes and the five-kingdom system59
2. Characteristics and representatives of kingdoms60

B. Plants

1. Evolution (including adaptation to land and major divisions62
2. Anatomy (including roots, stems, leaves, and reproductive structures.....63
3. Physiology (C3 and C4 photosynthesis, hormones, photoperiods, water and nutrient uptake, translocation65
4. Reproduction (alternation of generations, fertilization and zygote formation, dispersal, germination, growth and differentiation, vegetative propagation69

C. Animals

1. Evolution (phylogeny and classification, major phyla70
2. Life functions and associated structures (digestion, excretion, nervous control, contractile systems and movement, support, integument, immunity, endocrine system72
3. Reproduction and development (gametogenesis, fertilization, parthenogenesis, embryogenesis, growth and differentiation, metamorphosis, aging84
4. Behavior (taxes, instincts, learned behaviors, communication91

V. ECOLOGY

- A. Populations (intraspecific competition, density factors, population growth, dispersion patterns, life-history patterns, social behavior93
- B. Communities (niche, interspecific relationships, species diversity, succession 95
- C. Ecosystems (terrestrial, aquatic, biomes, energy flow, biogeochemical cycles, stability and disturbances, human impact, interrelationships among ecosystems 99

TEACHER CERTIFICATION STUDY GUIDE

VI. SCIENCE, TECHNOLOGY, AND SOCIETY

A. Impact of science and technology on the environment and human affairs	108
B. Human nature-induced hazards	108
C. Issues and applications (production, storage, use, management, and disposal of consumer products and energy, and management of natural resources	109
D. Social, political, ethical, and economic issues in biology	110
E. Societal issues with healthy and medical advances	111
Sample Essay	112
Sample Exam	119
Answer Key	144
Rationale	145
