DOMAIN I

ALGEBRA AND NUMBER THEORY 1

COMPETENCY 1

ALGEBRA AND NUMBER THEORY 3

Skill 1.1: Demonstrate an understanding of the structure of the natural, integer, rational, real, and complex number systems and the ability to perform basic operations (+, −, ×, and ÷) on numbers in these systems 3

Skill 1.2: Compare and contrast properties (e.g., closure, commutativity, associativity, distributivity) of number systems under various operations 10

Skill 1.3: Demonstrate an understanding of the properties of counting numbers (e.g., prime, composite, prime factorization, even, odd, factors, multiples) 12

Skill 1.4: Solve ratio, proportion, percent, and average (including arithmetic mean and weighted average) problems 18

Skill 1.5: Work with algebraic expressions, formulas, and equations; add, subtract, multiply, and divide polynomials; add, subtract, multiply, and divide algebraic fractions; perform standard algebraic operations involving complex numbers, radicals, and exponents, including fractional and negative exponents 19

Skill 1.6: Solve and graph systems of equations and inequalities, including those involving absolute value 19

Skill 1.7: Interpret algebraic principles geometrically 27

Skill 1.8: Recognize and use algebraic representations of lines, planes, conic sections, and spheres 28

Skill 1.9: Solve problems in two and three dimensions (e.g., find the distance between two points, find the coordinates of the midpoint of a line segment) 34

DOMAIN II

MEASUREMENT, GEOMETRY, AND TRIGONOMETRY 35

COMPETENCY 2

MEASUREMENT 37

Skill 2.1: Make decisions about units and scales that are appropriate for problem situations involving measurement; use unit analysis 37

Skill 2.2: Analyze precision, accuracy, and approximate error in measurement situations 45

Skill 2.3: Apply informal concepts of successive approximation, upper and lower bounds, and limit in measurement situations 46

COMPETENCY 3

GEOMETRY 49

Skill 3.1: Solve problems using relationships of parts of geometric figures (*e.g.*, medians of triangles, inscribed angles in circles) and among geometric figures (*e.g.*, congruence and similarity) in two and three dimensions 49

Skill 3.2: Describe relationships among sets of special quadrilaterals, such as the square, rectangle, parallelogram, rhombus, and trapezoid 59

Skill 3.3: Solve problems using the properties of triangles, quadrilaterals, polygons, circles, and parallel and perpendicular lines.... 63

Skill 3.4: Solve problems using the properties of circles, including those involving inscribed angles, central angles, chords, radii, tangents, secants, arcs, and sectors 71

Skill 3.5: Understand and apply the Pythagorean Theorem and its converse 78

Skill 3.6: Compute and reason about perimeter, area/surface area, or volume of two- and three-dimensional figures or of regions or solids that are combinations of these figures..... 80

Skill 3.7: Solve problems involving reflections, rotations, and translations of geometric figures in the plane 88

COMPETENCY 4

TRIGONOMETRY 94

Skill 4.1: Define and use the six basic trigonometric relations using degree or radian measure of angles; know their graphs and be able to identify their periods, amplitudes, phase displacements or shifts, and asymptotes 94

Skill 4.2: Apply the Law of Sines and the Law of Cosines..... 103

Skill 4.3: Apply the formulas for the trigonometric functions of $x/2$, $2x$, $x + y$, and $x - y$; prove trigonometric identities..... 104

Skill 4.4: Solve trigonometric equations and inequalities 109

Skill 4.5: Convert between rectangular and polar coordinate systems..... 111

DOMAIN III

FUNCTIONS AND CALCULUS 113

COMPETENCY 5

FUNCTIONS 115

Skill 5.1: Demonstrate an understanding of and the ability to work with functions in various representations (*e.g.*, graphs, tables, symbolic expressions, and verbal narratives), and the ability to convert flexibly among them 115

Skill 5.2: Find an appropriate family of functions to model particular phenomena (*e.g.*, population growth, cooling, simple harmonic motion)..... 116

Skill 5.3: Determine properties of a function such as domain, range, intercepts, symmetries, intervals of increase or decrease, discontinuities, and asymptotes 117

Skill 5.4: Use the properties of trigonometric, exponential, logarithmic, polynomial, and rational functions to solve problems 122

Skill 5.5: Determine the composition of two functions; find the inverse of a one-to-one function in simple cases and know why only one-to-one functions have inverses..... 133

Skill 5.6: Interpret representations of functions of two variables, such as three-dimensional graphs, level curves, and tables..... 135

COMPETENCY 6

CALCULUS 137

Skill 6.1: Demonstrate an understanding of what it means for a function to have a limit at a point; calculate limits of functions or determine that the limit does not exist; solve problems using the properties of limits	138
Skill 6.2: Understand the derivative of a function as a limit, as the slope of a curve, and as a rate of change (e.g., velocity, acceleration, growth, decay)	141
Skill 6.3: Show that a particular function is continuous; understand the relationship between continuity and differentiability	143
Skill 6.4: Numerically approximate derivatives and integrals	148
Skill 6.5: Use standard differentiation and integration techniques	148
Skill 6.6: Analyze the behavior of a function (e.g., find relative maxima and minima, concavity); solve problems involving related rates; solve applied minima-maxima problems	153
Skill 6.7: Demonstrate an understanding of and the ability to use the Mean Value Theorem and the Fundamental Theorem of Calculus	161
Skill 6.8: Demonstrate an intuitive understanding of integration as a limiting sum that can be used to compute area, volume, distance, or other accumulation processes	163
Skill 6.9: Determine the limits of sequences and simple infinite series	179

DOMAIN IV

DATA ANALYSIS AND STATISTICS AND PROBABILITY..... 181

COMPETENCY 7

DATA ANALYSIS AND STATISTICS 183

Skill 7.1: Organize data into a suitable form (e.g., construct a histogram and use it in the calculation of probabilities)	183
Skill 7.2: Know and find the appropriate uses of common measures of central tendency (e.g., population mean, sample mean, median, mode) and dispersion (e.g., range, population standard deviation, sample standard deviation, population variance, sample variance)	187
Skill 7.3: Analyze data from specific situations to determine what type of function (e.g., linear, quadratic, exponential) would most likely model that particular phenomenon; use the regression feature of the calculator to determine curve of best fit; interpret the regression coefficients, correlation, and residuals in context	192
Skill 7.4: Understand and apply normal distributions and their characteristics (mean, standard deviation)	196
Skill 7.5: Understand how sample statistics reflect the values of population parameters, and use sampling distributions as the basis for informal inference	199
Skill 7.6: Understand the differences among various kinds of studies and which types of inferences can legitimately be drawn from each	200
Skill 7.7: Know the characteristics of well-defined studies, including the role of randomization in surveys and experiments	200

COMPETENCY 8

PROBABILITY 202

Skill 8.1: Understand the concepts of sample space and probability distribution, and construct sample spaces and distributions in simple cases	202
---	-----

Skill 8.2: Understand the concepts of conditional probability and independent events; understand how to compute the probability of a compound event	204
Skill 8.3: Compute and interpret the expected value of random variables in simple cases (<i>e.g., fair coins, expected winnings, expected profit</i>).....	206
Skill 8.4: Use simulations to construct empirical probability distributions and to make informal inferences about the theoretical probability distribution	207

DOMAIN V MATRIX ALGEBRA AND DISCRETE MATHEMATICS 209

COMPETENCY 9 MATRIX ALGEBRA 211

Skill 9.1: Understand vectors and matrices as systems that have some of the same properties as the real number system (<i>e.g., identity, inverse, and commutativity under addition and multiplication</i>).....	211
Skill 9.2: Scalar multiply, add, subtract, and multiply vectors and matrices; find inverses of matrices	212
Skill 9.3: Use matrix techniques to solve systems of linear equations	217
Skill 9.4: Use determinants to reason about inverses of matrices and solutions to systems of equations	219
Skill 9.5: Understand and represent translations, reflections, rotations, and dilations of objects in the plane by using sketches, coordinates, vectors, and matrices	220

COMPETENCY 10 DISCRETE MATHEMATICS 225

Skill 10.1: Solve basic problems that involve counting techniques, including the multiplication principle, permutations, and combinations; use counting techniques to understand various situations (<i>e.g., number of ways to order a set of objects, to choose a subcommittee from a committee, to visit n cities</i>)	225
Skill 10.2: Find values of functions defined recursively and understand how recursion can be used to model various phenomena; translate between recursive and closed-form expressions for a function	231
Skill 10.3: Determine whether a binary relation on a set is reflexive, symmetric, or transitive; determine whether a relation is an equivalence relation	233
Skill 10.4: Use finite and infinite arithmetic and geometric sequences and series to model simple phenomena (<i>e.g., compound interest, annuity, growth, decay</i>)	234
Skill 10.5: Understand the relationship between discrete and continuous representations and how they can be used to model various phenomena	239
Skill 10.6: Use difference equations, vertex-edge graphs, trees, and networks to model and solve problems	241

SAMPLE TEST

Sample Test	247
Answer Key	260
Rigor Table	260
Sample Questions with Rationales	261
